**Full Stack Assignment – 10**

**Assignment ID:** FSD-10

**Title:** Candidate Shortlisting Management System

**Duration:** 3 Hours

## 1️⃣ Objective

Design and develop a **Candidate Shortlisting Management System** that allows recruiters to review candidate applications and HR personnel to manage the shortlisting process.
The system must enforce a fixed status flow and ensure **data persistence using a database**.

## 2️⃣ User Roles

**RECRUITER**

- Register and log in to the system
- View candidate applications
- Update candidate status

**HR**

- Log in to the system
- View all candidates and their statuses
- Oversee the shortlisting process

## 3️⃣ Functional Requirements

**Authentication & Authorization**

- Implement user registration and login
- Use **JWT-based authentication**
- Protect all backend APIs using JWT
- Enforce **role-based access control** on APIs and frontend views

**Candidate Management**

- Store candidate details in the database
- Fetch candidate information dynamically
- Allow authorized users to update candidate status

## 4️⃣ Business Rule (Critical)

### ⚠️ Candidate status must follow this flow only:

APPLIED → SHORTLISTED → REJECTED

Skipping steps or modifying a final status is **not allowed**.

## 5 Technical Constraints (Mandatory)

- All candidate data **must persist in a database**
- Hardcoded or in-memory data storage is **not allowed**
- Backend APIs must reflect actual database state
- JWT authentication and role validation are mandatory
- Use environment variables for sensitive configuration

## 6 Frontend Requirements

- Login and registration pages
- Role-based dashboards for RECRUITER and HR
- Candidate listing with current status
- Status update actions based on role

UI design is not evaluated; logical correctness matters.

## 7 Submission Requirements (Strict)

**GitHub Repository**

- Backend source code
- Frontend source code
- Proper folder structure
- Clear and meaningful commit history

**Live Deployment**

- Live frontend deployment link
- Live backend deployment link
- Backend must be connected to the database

**README.md (Mandatory)**

The README file must include:

- Project overview
- Tech stack used
- User roles and permissions
- API endpoints
- Database schema or collections
- Steps to run the project locally
- Live frontend and backend links

## 8 Evaluation Note

Evaluation focuses on **state transition logic, role enforcement, and end-to-end execution**.
