Full Stack Assignment – 11

Assignment ID: FSD-11

Title: Submission Review Management System

Duration: 3 Hours

1️⃣ Objective

Design and develop a **Submission Review Management System** where contributors submit entries and reviewers evaluate them.
The system must enforce resubmission limits and ensure **data persistence using a database**.

2️⃣ User Roles

CONTRIBUTOR

- Register and log in to the system
- Submit an entry
- View submission status
- Resubmit entries (within allowed limits)

REVIEWER

- Log in to the system
- View all submissions
- Approve or reject submissions

3️⃣ Functional Requirements

Authentication & Authorization

- Implement user registration and login
- Use **JWT-based authentication**
- Protect all backend APIs using JWT
- Enforce **role-based access control** on APIs and frontend views

Submission Handling

- CONTRIBUTOR can submit entries with required details
- All submissions must be stored in the database
- REVIEWER can approve or reject submissions
- Submission status must be fetched dynamically from the database

4️⃣ Business Rule (Critical)

⚠️ **A contributor is allowed a maximum of two resubmissions per entry.**

Any further resubmission attempts must be rejected.

5️⃣ Technical Constraints (Mandatory)

- All submission data **must persist in a database**
- Hardcoded or in-memory submission storage is **not allowed**
- Backend APIs must reflect actual database state
- JWT authentication and role validation are mandatory
- Use environment variables for sensitive configuration

6️⃣ Frontend Requirements

- Login and registration pages
- Role-based dashboards for CONTRIBUTOR and REVIEWER
- Submission form for CONTRIBUTOR
- Submission listing with current status
- Approve/Reject actions for REVIEWER

UI design is secondary; correctness and logic are key.

7️⃣ Submission Requirements (Strict)

GitHub Repository

- Backend source code
- Frontend source code
- Proper folder structure
- Clear and meaningful commit history

Live Deployment

- Live frontend deployment link
- Live backend deployment link
- Backend must be connected to the database

README.md (Mandatory)

The README file must include:

- Project overview
- Tech stack used
- User roles and permissions
- API endpoints

- Database schema or collections
- Steps to run the project locally
- Live frontend and backend links

8️⃣ Evaluation Note

Evaluation focuses on **constraint enforcement, role handling, and end-to-end integration**.
