Full Stack Assignment – 27

Assignment ID: FSD-27

Title: Interview Slot Management System

Duration: 3 Hours

1️⃣ Objective

Design and develop an **Interview Slot Management System** that allows candidates to book interview slots and recruiters to manage interview schedules.
The system must enforce slot restrictions and ensure **data persistence using a database**.

2️⃣ User Roles

CANDIDATE

- Register and log in to the system
- View available interview slots
- Book an interview slot
- View booked slot details

RECRUITER

- Register and log in to the system
- Create and manage interview slots
- View all candidate bookings

3️⃣ Functional Requirements

Authentication & Authorization

- Implement user registration and login
- Use **JWT-based authentication**
- Protect all backend APIs using JWT
- Enforce **role-based access control** on APIs and frontend views

Interview Slot Management

- RECRUITER can create interview slots with date and time
- Slot data must be stored in the database
- Slot availability must be fetched dynamically

Slot Booking

- CANDIDATE can book an available interview slot
- Booking details must be stored in the database

- CANDIDATE can view booking status

4️⃣ Business Rule (Critical)

⚠️ **A candidate can have only one active interview slot at a time.**

Any attempt to book multiple active slots must be rejected.

5️⃣ Technical Constraints (Mandatory)

- All slot and booking data **must persist in a database**
- Hardcoded or in-memory storage is **not allowed**
- Backend APIs must reflect actual database state
- JWT authentication and role validation are mandatory
- Use environment variables for sensitive configuration

6️⃣ Frontend Requirements

- Login and registration pages
- Role-based dashboards for CANDIDATE and RECRUITER
- Slot listing and booking view for CANDIDATE
- Slot creation and booking overview for RECRUITER

UI design is not evaluated; correctness and rule enforcement matter.

7️⃣ Submission Requirements (Strict)

GitHub Repository

- Backend source code
- Frontend source code
- Proper folder structure
- Clear and meaningful commit history

Live Deployment

- Live frontend deployment link
- Live backend deployment link
- Backend must be connected to the database

README.md (Mandatory)

The README file must include:

- Project overview
- Tech stack used
- User roles and permissions

- API endpoints
- Database schema or collections
- Steps to run the project locally
- Live frontend and backend links

8 Evaluation Note

Evaluation focuses on **constraint handling, role enforcement, and end-to-end execution**.
