

- Must compute dynamically
- Must validate ID

Date: 21 / 04 / 2026

Duration: 1 hour 45

CONTINUOUS ASSESSMENT 2

III YEAR – SEMESTER 6

CSE23AE304 - PCP V

(B.Tech. E01,E02,E03,E04)

SET B

Edge Cases:

- Invalid ID → show “Activity not found”
- Division by zero → handle safely

Question 3 – Filter Activities

Route: /filter

Requirements:

- Filter activities where:
 - steps $\geq$ input value

Constraints:

- Must use .filter()
- Must be dynamic (user input)
- Must not refetch data

Validation:

- Empty input → show error
- Invalid input → show message

Interdependency:

- Must filter only **valid activities (Q1 rules)**

Question 4 – Goal Status Update

Route: /activities

Requirements:

- Add functionality to **toggle goalAchieved**

Business Logic (Buggy Requirement):

- If steps $\geq$ 8000:
 - goalAchieved must automatically become true

Constraints:

- Must use reducer action
- Must not directly modify state

Edge Cases:

- Invalid activity → ignore
- Already correct value → no duplicate update

Interdependency:

- Changes must reflect in:
 - Activity list
 - Stats page

Question 5 – Activities Analytics Dashboard

Route: /stats

Requirements:

Display:

- Total valid activities
- Count of goal achieved
- Count of goal not achieved

Constraints:

- Must use .reduce()
- Must not store values in state
- Must compute dynamically

Edge Cases:

- Ignore invalid activities
- Invalid goalAchieved values → exclude

Expected Output:

```
{
  "totalActivities": 30,
  "goalAchievedCount": 18,
  "goalNotAchievedCount": 10
}
```

Testing Requirement:

```
<div data-testid="total-activities">30</div>
<div data-testid="goal-achieved">18</div>
<div data-testid="goal-not-achieved">10</div>
```

Global State Requirement:

```
window.appState = {
  totalActivities: 30,
  goalAchievedCount: 18,
  goalNotAchievedCount: 10
};
```
