Full-Stack Review Workshop — 2-Day Training Plan

Session
Kickoff + starter repo walkthrough (enterprise folder structure, auth scaffold, DB connection, base schemas pre-built)
Authentication + Authorization Part 1: JWT auth + first role-check middleware built live
Authentication + Authorization Part 2: full Permission Matrix (Admin/Agent/Requester) built by students
Ticket Workflow State Machine Part 1: skeleton + first 2 status transitions (trainer builds)
Ticket Workflow State Machine Part 2: remaining transitions + role guards built by students
Reusable response/error format + async-handler middleware, retrofitted onto controllers built so far
Query Optimization (indexing + aggregation pipeline for dashboard) + Search/Sort/Filter/Pagination
Enterprise frontend architecture walkthrough: folder structure (components/, layouts/, context/, hooks/, services/, pages/) + reusable Layout shell (Sidebar + Topbar + Content outlet)
useContext: AuthContext (current user/role, trainer builds) + TicketContext (ticket list/filters, students build same pattern)
useState: reusable components — TicketCard + Modal (create/edit ticket form, trainer builds), FilterBar + Pagination (students build, same props contract)
useEffect: mount-time data fetching, dependency arrays, cleanup — wired to Promise.all/allSettled for parallel calls (ticket + comments + activity log)
Deployment Part 1: env config + build process
Deployment Part 2: deploy backend + frontend to a live URL
Portfolio pass + team present/explain-your-build round

Delivery Mode	College Outcome(s) Covered
Trainer Demo (partial)	Refine/restructure project architecture
Trainer Demo (partial)	Ensure AI-free development; Optimize API/database performance
Student Build	Ensure AI-free development; Optimize API/database performance
Trainer Demo (partial)	Refine/restructure project architecture
Student Build	Refine/restructure project architecture
Trainer + Student Split	Refine/restructure project architecture
Trainer + Student Split	Optimize API/database performance
Trainer Demo (partial)	Refine/restructure project architecture; Present portfolio-ready applications
Trainer + Student Split	Refine/restructure project architecture
Trainer + Student Split	Present portfolio-ready applications
Trainer + Student Split	Optimize API/database performance
Trainer Demo (partial)	Implement advanced deployment pipelines (scoped — see Scope Notes)
Trainer + Student Split	Implement advanced deployment pipelines (scoped — see Scope Notes)
Assessment	Present portfolio-ready applications; Undertake responsive technical interview scrutiny
