1. Drive at a glance

Role	Associate Product Engineer
Locations	Bangalore, Hyderabad, Pune
CTC	INR 7 LPA
Eligibility	B.Tech / BE (CS and IT), minimum 50% overall

Round	Duration	What it tests
Online MCQ test	45 min	Speed and accuracy on aptitude, verbal and CS fundamentals
AI telephonic interview	15 to 20 min	Spoken communication, clarity, self-introduction, basic technical recall
Online coding test	30 min	Writing correct code fast, often string and parsing problems
Technical interview (one-on-one)	45 min	Problem solving live, CS fundamentals, projects, web basics

All four rounds run on the same day. Each round eliminates candidates, and only those shortlisted move to the next.

2. Pattern rounds with important areas

Round 1: Online MCQ test (45 min, about 50 questions)

Area	Important topics
Quantitative aptitude	Percentages, ratio and proportion, speed-time-distance, time and work, profit and loss, probability, averages
Logical reasoning	Number and letter series, coding-decoding, blood relations, seating arrangement, syllogisms
Verbal ability	Synonyms, error spotting, sentence completion, short reading comprehension
Technical (CS)	Output prediction in C/Java/Python, DSA basics and time complexity, DBMS and SQL, OS, OOP, networking and web basics

Round 2: AI telephonic interview (15 to 20 min)

Area	Important topics
Self-introduction	60 to 75 second answer: who you are, what you built, why this role
Project explanation	Problem solved, tech stack, your exact contribution, result
Basic CS concepts	Array vs linked list, SQL vs NoSQL, OOP pillars, what happens when you open a URL
Behavioural	Difficult bug, teamwork, failure; answered in STAR format
Company and role fit	Why DeltaX, why product engineering, willingness to relocate
Spoken delivery	Clear pace, no fillers, complete answers that stop cleanly

Round 3: Online coding test (30 min)

Pattern	Important problems
String parsing and recursion	Parse a JSON string and print all key-value pairs, including nested keys
String manipulation	Reverse words in a sentence, palindrome checks, character counts
Hash map	First non-repeating character, Two Sum, group anagrams
Stack	Balanced brackets
Sliding window	Longest substring without repeating characters
Arrays	Second largest element, rotation, duplicates, prefix sums

Round 4: Technical interview (45 min)

Area	Important topics
DSA	Arrays, strings, hash maps, stacks, queues, linked lists, binary search, sorting, recursion, basic trees; Big-O of each
OOP	Four pillars with code examples, overloading vs overriding, interface vs abstract class
DBMS and SQL	Keys, joins, GROUP BY with HAVING, normalisation up to 3NF, indexes, ACID
Operating systems	Process vs thread, deadlock conditions, scheduling basics, paging
Networking and web	HTTP methods and status codes, URL-to-page flow, cookies vs sessions, REST
Frontend	HTML structure, CSS box model and flexbox, JavaScript closures, promises, async/await, the DOM
Backend	Building a REST API, request-response cycle, JSON, authentication basics
Projects and resume	Architecture, your exact role, one hard bug you fixed, what you would improve

3. Previous year questions (2023 to 2025)

Compiled from nine DeltaX campus interview write-ups on GeeksforGeeks, LeetCode Discuss, lets-code.co.in and Glassdoor. Candidates share topics more often than exact questions, so the MCQ part lists topics by how often they were reported.

Online MCQ: most-reported topics

Topic	Reports (of 9)	What was asked
DBMS and SQL	6	SQL query output, keys, normalisation, joins
Networking	6	OSI and TCP/IP layers, protocols, addressing basics
Programming and data structures	6	Output-based questions on code and data structures
Operating systems	5	Processes, scheduling, deadlock, memory management
C pseudo-code	4	Trace the code and predict the output; described as the questions needing the most reasoning
OOP	3	Pillars, inheritance, polymorphism
Microprocessors	3	Basic architecture questions (reported in 2023 drives)
Software engineering and testing	2	SDLC models, testing types and methodology

Pattern notes: 50 questions in 45 minutes in most reports, sometimes on a Google Form with no visible timer. Candidates advise finishing in about 30 minutes. Shortlists are small, for example 25 of about 1,500, 26 of about 800, and 101 of 1,385 students.

Online coding: problems named by candidates

Problem	Topic	Where it appeared
0/1 Knapsack	Dynamic programming	Coding round; a knapsack variant was also asked in an interview
Rotten Oranges (LeetCode 994)	Graph, BFS	Coding round
Roman numeral to integer, printing "Invalid" for bad input	String, validation	Coding round and interview
Combination Sum II (LeetCode 40)	Recursion, backtracking	Coding round
Bus routes: two n-stop routes merge and later split; can a person travel from stop A to stop B?	Graph or array traversal	Coding round (2025); asked again in the interview
Phone number validation across several formats	String, validation	Coding round (2025)
Pivot index (LeetCode 724)	Array, prefix sum	Interview
JSON string parser: print key-value pairs	String parsing	Interview (2025 to 2026)
Replace the substring for balanced string (LeetCode 1234)	Sliding window	Interview
XOR of all subarray XORs	Bit manipulation	Interview

Pattern notes: past drives had 5 in-house, story-based problems in 2 to 3 hours, each with its own time limit and no switching between questions. This year's schedule gives only 30 minutes, so expect fewer or shorter problems. Reviewers check the code and approach, so a partly passing solution can still clear.

Coding topics reported, with practice problems

Topic	Practice on LeetCode
Arrays and hash maps	Two Sum (1), Pivot Index (724), Product of Array Except Self (238), Subarray Sum Equals K (560)
Strings and validation	Roman to Integer (13), Valid Palindrome (125), String to Integer (8), Valid Number (65)
Recursion and backtracking	Subsets (78), Combination Sum (39), Combination Sum II (40), Permutations (46)
Dynamic programming	Climbing Stairs (70), House Robber (198), Coin Change (322), Partition Equal Subset Sum (416)
Binary search	Binary Search (704), Search in Rotated Sorted Array (33), Koko Eating Bananas (875)
Graphs and trees	Number of Islands (200), Rotting Oranges (994), Course Schedule (207), Max Depth of Binary Tree (104)
Sliding window	Longest Substring Without Repeating Characters (3), Replace the Substring for Balanced String (1234)

Interview questions repeated across years

Area	Questions
HR and intro	Tell me about yourself; your goals; why DeltaX; five-year plan
Projects	Deep dive into projects and resume skills
OOP	Four pillars with real-world examples; inheritance and polymorphism; why Java
OOP design	Design a music or song player app with classes (albums, songs, singers, favourites)
DBMS	Design a database schema for Spotify; a normalisation and cardinality scenario
Coding	Re-solve your coding-round problem aloud with pseudocode and corner cases

4. Training topics

Topics are grouped by drive round. Priority reflects how often each area appeared in past DeltaX drives.

#	Topic	Sub-topics	Priority
Module 1: Online MCQ			
1.1	Quantitative aptitude	Percentages, ratio and proportion, speed-time-distance, time and work, profit and loss, averages, probability	**High**
1.2	Logical reasoning	Number and letter series, coding-decoding, blood relations, seating arrangement, syllogisms	**High**
1.3	Verbal ability	Synonyms, error spotting, sentence completion, reading comprehension	**Medium**
1.4	C pseudo-code and output prediction	Loops, operators, pre/post increment, recursion tracing, pointers and arrays	**High**
1.5	DBMS and SQL	Keys, joins, GROUP BY / HAVING, normalisation to 3NF, query output	**High**
1.6	Computer networks	OSI and TCP/IP layers, protocols, IP addressing basics	**High**
1.7	Operating systems	Process vs thread, CPU scheduling, deadlock, memory management, paging	**High**
1.8	OOP concepts	Four pillars, overloading vs overriding, abstract class vs interface	**Medium**
1.9	Data structures theory	Time complexity, choosing the right structure, output-based questions	**High**
1.10	Software engineering and testing	SDLC models, testing types	**Low**
Module 2: AI telephonic interview			
2.1	Self-introduction	60 to 75 second answer	**High**
2.2	Project explanation	Problem, stack, role, challenge, result (2 min)	**High**
2.3	Core CS concepts, spoken	Array vs linked list, SQL vs NoSQL, OOP pillars, URL-to-page flow	**Medium**
2.4	Behavioural answers	STAR format: bug, teamwork, failure	**Medium**
2.5	Company and role fit	Why DeltaX, why this role, relocation	**Medium**
2.6	Voice delivery	Pace, no fillers, clean endings	**High**
Module 3: Online coding (30 min)			
3.1	Arrays and hash maps	Two Sum, Pivot Index, prefix sums, frequency count	**High**
3.2	Strings and validation	Roman to Integer (with an invalid check), phone number validation, palindromes, reverse words	**High**
3.3	String parsing	JSON key-value parser, with a library and by hand	**High**

#	Topic	Sub-topics	Priority
3.4	Recursion and backtracking	Subsets, Combination Sum II	Medium
3.5	Dynamic programming basics	Climbing Stairs, House Robber, 0/1 Knapsack	Medium
3.6	Stack and sliding window	Balanced Brackets, Longest Substring Without Repeating Characters	Medium
3.7	Graphs	Grid BFS (Rotten Oranges), bus-routes traversal	Medium
3.8	Binary search	On a sorted array, on the answer	Low
3.9	Timed-test strategy	Reading story problems, brute force first, edge-case testing	High
Module 4: Technical interview			
4.1	Live problem solving	Clarify, brute force, optimise, dry run, pseudocode	High
4.2	Re-solving coding-round problems	Explain own solutions aloud	Medium
4.3	OOP design	Music player app with classes	High
4.4	Database design	Spotify schema, normalisation, cardinality	High
4.5	Web fundamentals	HTTP methods and status codes, REST, cookies vs sessions, JavaScript closures and async	Medium
4.6	Project and resume deep dive	Architecture, contribution, hardest bug	High
4.7	HR questions	Goals, five-year plan, questions to ask	Low
Module 5: Mocks			
5.1	MCQ mock	50 questions in 45 minutes	High
5.2	Coding mock	30-minute timed test	High
5.3	AI-round voice drill	Recorded answers	High
5.4	Technical mock interview	One-on-one	High
